

NETOP™ NetFilter

Web Filtering Software

Netop NetFilter is the innovative Web filtering software that delivers reliable and continuously updated protection for schools and businesses. Using sophisticated analysis, NetFilter provides content filtering to block pornography and other inappropriate content before it appears on computer screens. Flexible features halt instant messaging, chat and file sharing, and block unwanted downloads.

Block unwanted Web sites

Stop pornographic, offensive or illegal content. Built-in categories make it easy to filter out sites that promote gambling, violence, and other inappropriate activity.

Halt IM, chat and file-sharing

Suppress any unwanted program including instant messaging, chat or file-sharing with the click of a mouse. Set limits on streaming audio and video that consume network bandwidth.

Prevent downloads

Block unwanted file types from downloading by simply specifying the extension or fragments of the file name. Reliably block MP3 files, even if the file extension is disguised.

Real-time content filtering

NetFilter uses image, text and behavioral analysis to reliably assess and filter inappropriate content dynamically and in real time. New Web sites are analyzed instantly, eliminating the need to maintain lists of inappropriate sites.

BENEFITS

- Enforce Internet policies
- Increase productivity, decrease distractions
- Protect public image
- Reduce unrelated Internet use
- Shield Spyware, spam and malicious code
- Release bandwidth for legitimate use
- Superior combination of technologies
- Very easy to use
- No constant updates

Web sites that seem safe may not be. It is not unusual that sites download malware to the endpoint without the user knowing about it.

FEATURES

Block unwanted Web sites

Stop inappropriate, offensive or illegal content before it appears on computer screens. Block whole categories of Web sites with the click of a mouse.

Reliable content filter

NetFilter uses a 100% dynamic approach that is not dependent on URL lists that quickly become obsolete. New Web sites are analyzed and filtered in real-time without any updating.

Halt instant messaging, chat and file-sharing programs

Suppress IM, chat and file-sharing programs centrally. Stop or set limits on streaming audio and video that consume network bandwidth.

Block unwanted file types

Prevent the downloading of certain file types simply by specifying the file extension or fragments of the file name. Reliably block or limit MP3 files even if the file extension is deliberately modified.

Comprehensive logging and statistics

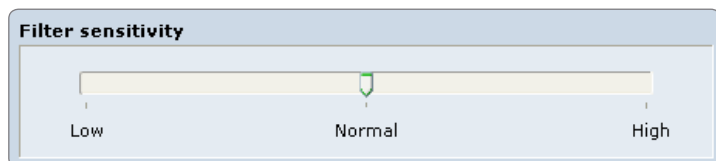

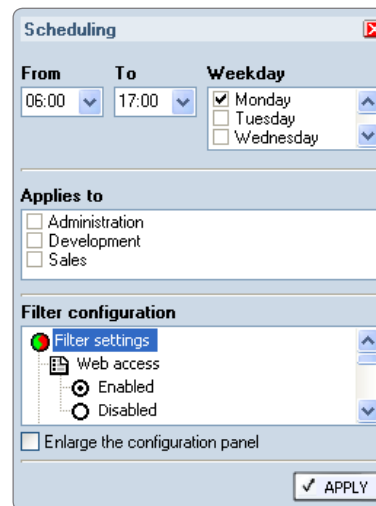

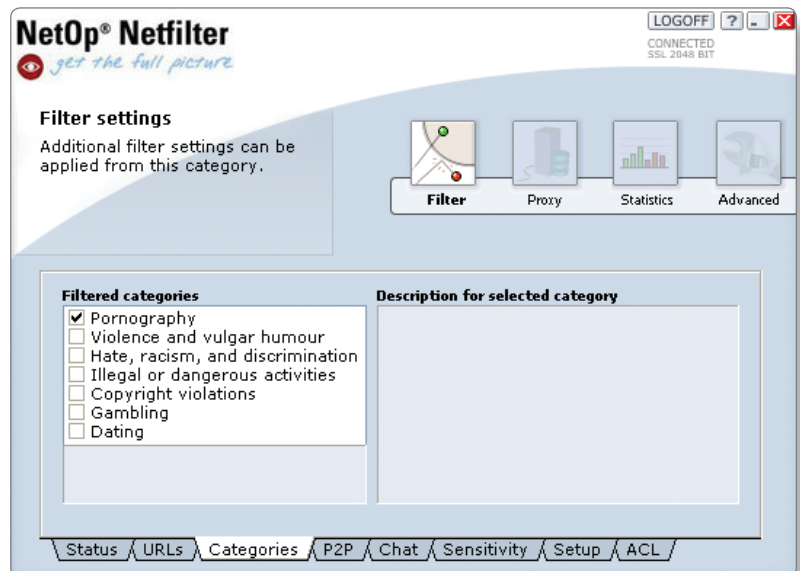

Log all activities and events centrally, down to user level if necessary, and view them graphically at any time. Integrate PC's outside the network using the free Business Desktop module.

Highly scalable

NetFilter is scalable to meet the needs of very large businesses and school systems. Adapt the program to any network size using multiple centrally administered NetFilter installations.

Outstanding accuracy and flexibility

NetFilter reliably identifies unwanted content through a combination of industry-leading technologies for professional text and image analysis, coupled with intelligent analysis of Web surfing behavior.
